

Shamiha's Journal

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment or the world's food supply.

One way to do this is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them for future generations.

Another way to do this is to use sustainable forestry. Sustainable forestry is a way of managing forests that will ensure that there are always enough trees to provide us with the products we need.

There are many other ways to meet the world's growing demand for food and other resources without harming the environment. We need to find these ways and use them to ensure that we have enough food and other resources for the future.

One of the most important things we can do to meet the world's growing demand for food and other resources is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them for future generations.

Shamihah's Journal

Hello My Name Is Shamiha Sellamuthu

Age: 22

Product Designer

Based in Singapore · From India

About Me

A fun, friendly soul who loves to travel, design, and discover new things. I find joy in exploring cultures, tasting new foods, and getting lost in places with stories to tell. There's something magical about city lights, they make me pause, dream, and feel alive. I enjoy quiet moments with music, spontaneous adventures, and turning ideas into something creative. To me, life is about staying curious, kind, and finding beauty in little things.

My companions

My happy place

Where the city lights meet the night sky

Facts about me

Creativity is my happy place

Cold coffee is my go-toe.

I'm into gaming, music & pets

My Design Journey

My journey with design started long before I knew it was called “design.”

As a child, I loved drawing, experimenting with colours, and turning ideas into something I could see. That curiosity grew into photography, video editing, and digital design, where I discovered that design is not just about making things look good, but about creating experiences that connect with people.

In college, joining a small XR group introduced me to the intersection of creativity and technology, and eventually led me to UI/UX. I explored this further as a UI/UX student intern at my university’s Apple Lab and through designing and launching a website called PropTrack with my friend. These experiences made me realise how much I enjoy understanding people, solving problems, and turning ideas into meaningful digital experiences.

Today, UI/UX and human-centred design are at the heart of what I want to pursue. I’m currently pursuing an MSc in Technology and Design (Human-Centred Design) at SUTD to build a stronger foundation through structured learning and real-world exploration. What started with a love for creating has now grown into a passion for understanding people and designing experiences around their needs.
